

Download Postgres from below link

<https://www.enterprisedb.com/downloads/postgres-postgresql-downloads>

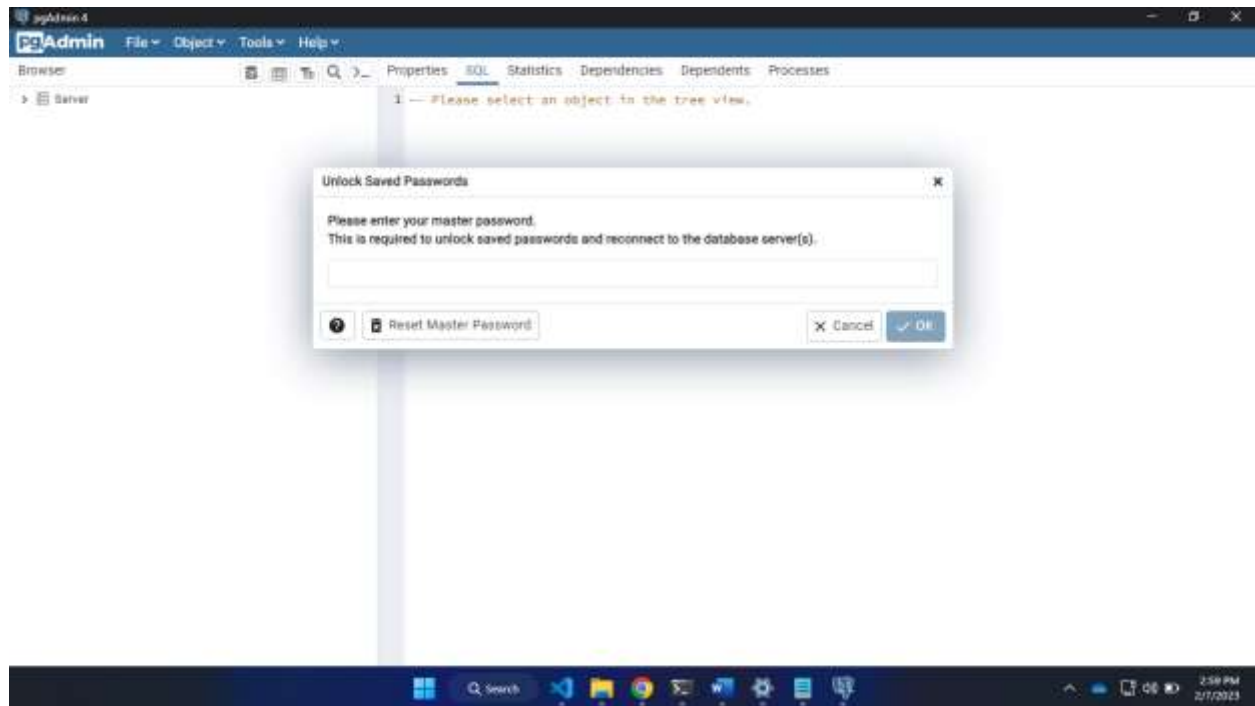

then install it

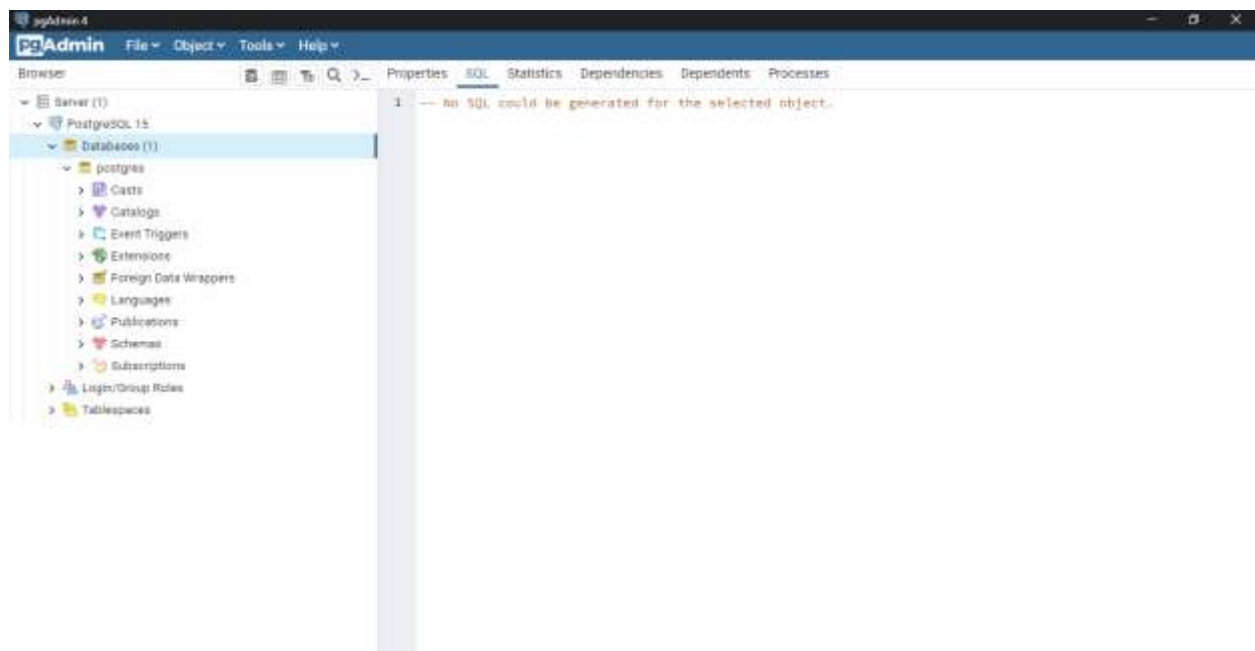

After installation is completed the go to windows search bar and type pgadmin and select the app to open

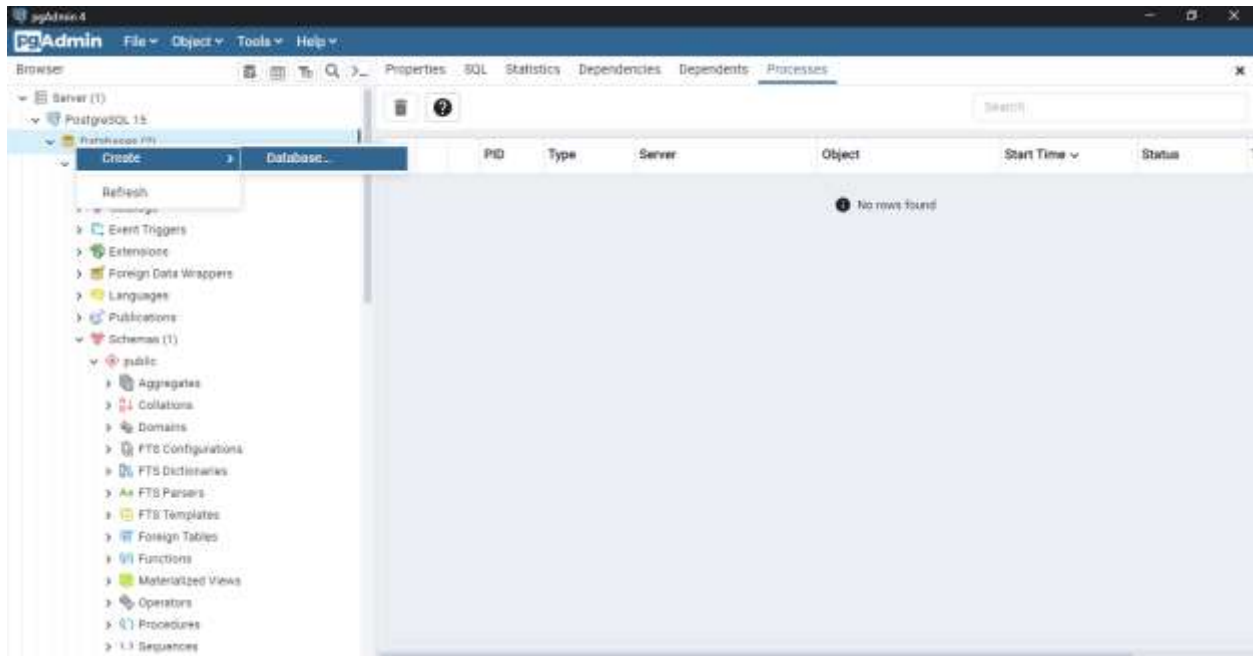

It will ask you to set or reset password. Insert the password what you have given during Postgres installation.

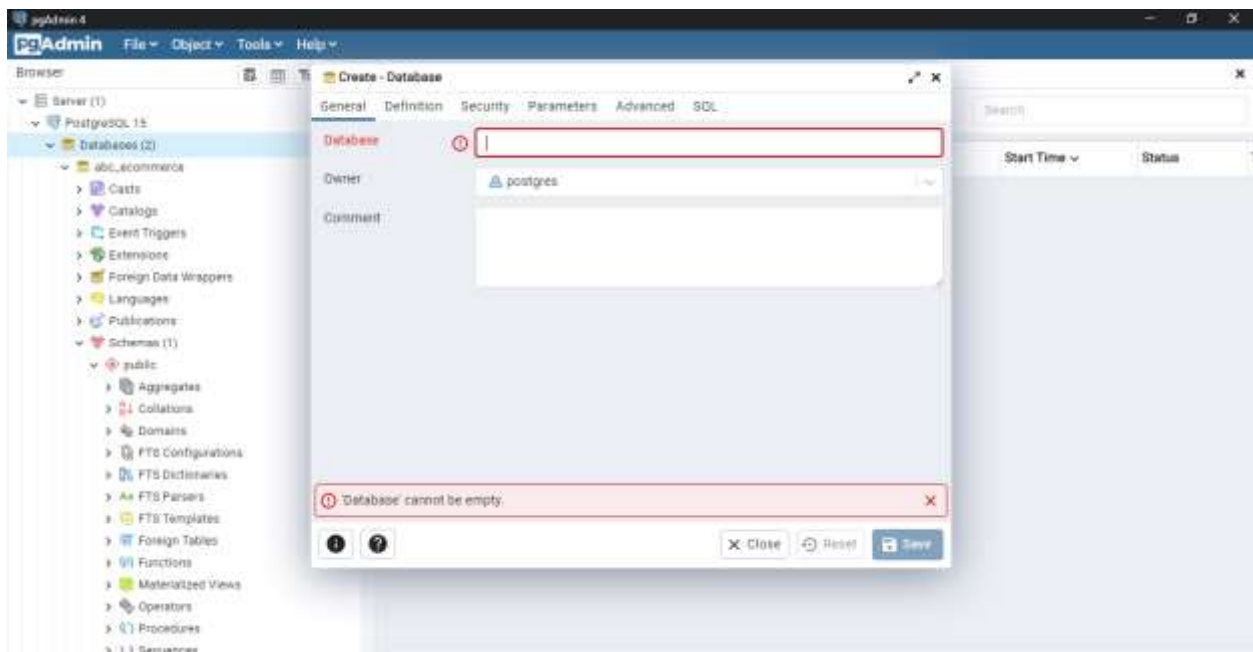

After that you will find below dash board

Right click on database and create database

Name the database based on your project.

Go to your project folder and write below command to install postgres driver for nestjs

```
npm i @nestjs/config @nestjs/typeorm typeorm pg
```

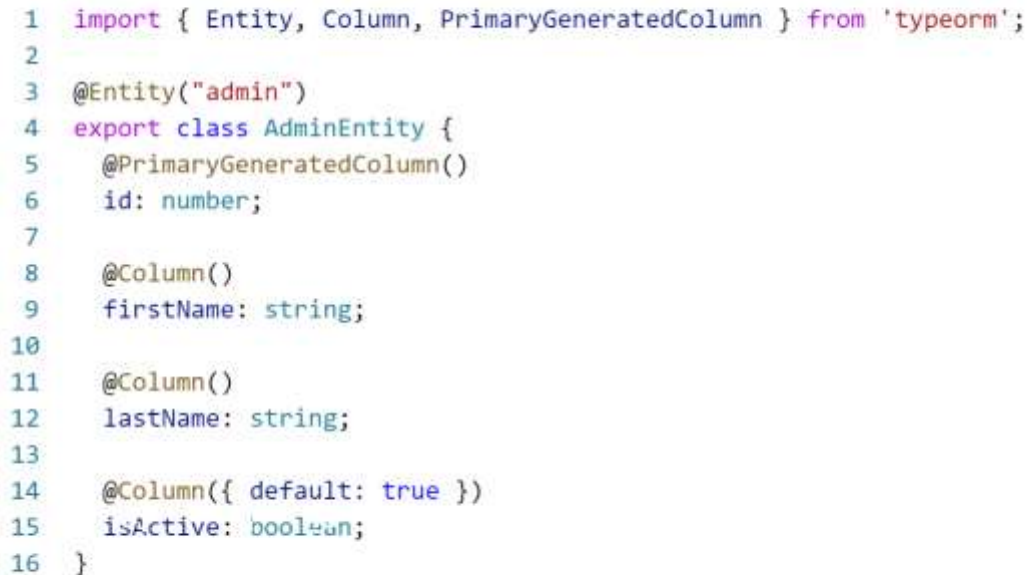

then go to your project's app.module.ts file and add database connection.

```
1 import { Module } from '@nestjs/common';
2 import { TypeOrmModule } from '@nestjs/typeorm';
3 import { AdminModule } from '../admin/adminmodule.module';
4
5
6 @Module({
7   imports: [AdminModule, TypeOrmModule.forRoot({
8     type: 'postgres',
9     host: 'localhost',
10    port: 5432,
11    username: 'postgres',
12    password: 'root',
13    database: 'postgres',
14    autoLoadEntities: true,
15    synchronize: true,
16  })],
17  controllers: [],
18  providers: [],
19 })
20 export class AppModule {}
21
```

Change it your database name

Then, go to your user-specific folder Ex. Admin and create an entity file for your user Ex. adminentity.entity.ts and write down the below code;

```
1  import { Entity, Column, PrimaryGeneratedColumn } from 'typeorm';
2
3  @Entity("admin")
4  export class AdminEntity {
5      @PrimaryGeneratedColumn()
6      id: number;
7
8      @Column()
9      firstName: string;
10
11     @Column()
12     lastName: string;
13
14     @Column({ default: true })
15     isActive: boolean;
16 }
```

Now run your project “npm run start:dev”

You suppose to see your table name admin is created.
